WHAT IS CLAIMED IS:

- 1 1. A method for processing a floor covering comprising a facecloth layer, a backing layer,
- 2 and optionally an adhesive or precoat layer, wherein the floor covering comprises at least one
- 3 layer containing a polyurethane formed by reacting a polyisocyanate and a first organic polyol,
- 4 which comprises:

- 5 contacting the floor covering with a second organic polyol;
- 6 heating the floor covering and second organic polyol; and
- 7 separating the facecloth layer from the backing layer.
 - 2. The method of claim 1, wherein said heating comprises increasing the temperature of the floor covering and second organic polyol sufficiently to at least partially liquefy the polyurethane.
 - 3. The method of claim 2, wherein said contacting comprises grinding floor covering into smaller pieces and mixing these pieces with said second organic polyol.
 - 4. The method of claim 3, wherein said polyurethane-containing layer is the backing layer or the adhesive or precoat layer, or both.
- 1 5. The method of claim 4, wherein the polyurethane-containing layer comprises a urethane-
- 2 modified bitumen.
- 1 6. The method of claim 4, further comprising reconstituting the backing layer by contacting
- 2 it with additional polyisocyanate.
- 1 7. The method of claim 1, wherein said first organic polyol and said second organic polyol
- 2 are the same.

- 1 8. The method of claim 2, wherein said contacting comprises disposing said second organic
- 2 polyol onto the facecloth layer of the floor covering, and pulling said facecloth away from said
- 3 backing layer.
- 1 9. The method of claim 8, wherein the backing layer is contacted with a material containing
- 2 additional polyisocyanate and adhered to a second facecloth, to form a second floor covering.
- 1 10. The method of claim 8, wherein the backing layer comprises a urethane-modified
- 2 bitumen.

- 1 11. The method of claim 8, wherein said first and second organic polyols are the same.
 - 12. The method of claim 8, further comprising contacting said facecloth layer with a second backing layer.
 - 13. The method of claim 8, wherein the layer containing the polyurethane is disposed between a precoat layer and the backing layer.
 - 14. The method of claim 8, wherein the backing layer comprises foamed polyurethane, and wherein the backing layer is the layer containing the polyurethane to be liquefied.
- 1 15. The method of claim 14, wherein the liquefied polyurethane obtained from the backing
- 2 layer is refoamed with added polyisocyanate.
